

## **Study Programme Design and Review Statement**

This Statement outlines the College's approach to the design, approval, monitoring, and periodic review of its study programmes. It describes the processes for programme development and accreditation, and for ongoing monitoring and review to ensure quality, relevance, and compliance with MFHEA and European standards. These processes are conducted in accordance with the College's internal quality assurance policies and procedures.

### **Programme Design and Accreditation**

The College follows a structured process for the development of new study programmes and the revision of existing ones. Programme design is aligned with the Malta Qualifications Framework (MQF), the European Credit Transfer and Accumulation System (ECTS), and relevant national and European quality standards.

All programmes undergo formal institutional approval and are submitted to the Malta Further and Higher Education Authority (MFHEA) for accreditation prior to delivery.

### **Programme Monitoring and Periodic Review**

Programme reviews are evidence-based and reflect stakeholders' feedback and developments within the discipline, the higher education field, and the labour market.

Where improvements or changes are identified, programmes are updated through established institutional approval processes. Changes are submitted to MFHEA for review and approval where required, in accordance with regulatory requirements.
